Sage Enterprise Intelligence for Sage ERP X3

sage

Bring light to your data, in a flash

Benefits

- **Reduce time** spent on business analysis and reporting.
- **Empower users** to analyze and report on information in a self-sufficient manner.
- **Simplify** and accelerate the distribution of information across the organization, for coherent and better-informed decision making.

Sage Enterprise Intelligence is an intuitive business intelligence solution integrated with Sage ERP X3 to help business users reduce time spent on analysis and reporting, and make faster, better-informed decisions. It empowers all users with a simple solution to access and analyze data in a self-sufficient manner, which eliminates the need for disparate tools and specialized skills, and can reduce time to decision.

The tight and secure integration of Sage Enterprise Intelligence with Sage ERP X3 ensures the reliability of critical business information and provides business users real-time and reliable information to make faster and better business decisions across the enterprise.

Empower managers and executives with self-service analytics

Business users access and analyze enterprise data in an intuitive self-sufficient manner, which can improve visibility into their business, accelerate notification of important changes, and reduce time to decision by 20% on average.
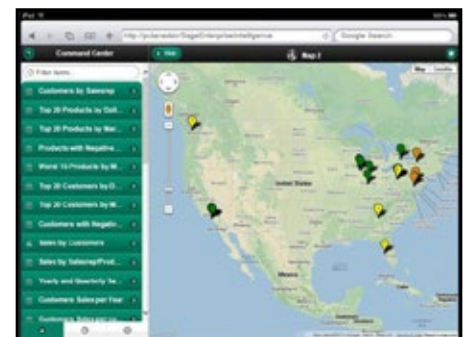

Improve collaboration and operational performance

Sage Enterprise Intelligence leverages the central database of Sage ERP X3 and other sources, which provides business users with coherent, real time insight on enterprise data, supports coherent decision making and fosters continuous cross-functional improvement.

It includes sharing and alert functionality to provide managers with consistent, up-to-date information that play a significant role in improving supply chain performance, resolving quality issues, improving marketing decisions, and building a faster, larger sales pipeline.

Sage Enterprise Intelligence empowers users to analyze and report on business data without assistance.

Gain remote access to enterprise data, including geospatial analysis, on mobile devices or a web browser.
